Improve key outcomes with advanced messaging on Remind

Consistent, meaningful communication is crucial for driving student outcomes. But with critical resources at stake, it can be challenging to foster and measure communication that makes a difference.

With Remind's new premium messaging features, your organization can reach specific recipients with timely, customized messages based on data from your student information system (SIS). Advanced messaging can help you transform communication across your community so it delivers more meaning—not more noise.

{{name}} was marked absent today for a total of {{absence_count}} absences this semester. Please reply to excuse today's absence or if you believe your student was incorrectly marked absent. Thank you!

With advanced messaging, you can:

Automate notifications to save you time.
Integrate Remind with your SIS to automate regular notifications about attendance, report cards, low lunch money balances, and more.

Reach exactly who you need to in your community.
Advanced messaging makes it simple to send a message based on student number or role. Just upload a CSV to Remind to reach specific groups with updates like graduation requirements or immunization forms.

Send relevant, customized messages.
Customize announcements with student data from your SIS to better address your community's needs and concerns.

**Advanced messaging is a premium feature through Remind Hub.
